

Project Initialization and Planning Phase

Date	20-06-2025
Team ID	SWTID1749906902
Project Name	Early Stage Disease Diagnosis System Using Human Nail Image Processing Using Deep Learning
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The current early-stage disease diagnosis process poses challenges for individuals, particularly in terms of accessibility, accuracy, and convenience. Many people delay or avoid medical consultations due to time constraints, cost, or lack of awareness, leading to missed opportunities for timely intervention. Our proposed system—an early-stage disease diagnosis solution using human nail image processing powered by deep learning—aims to address these gaps. By leveraging non-invasive, image-based diagnostics, we can offer users a fast, accessible, and reliable screening tool. Understanding user concerns around medical testing and creating an intuitive, user-friendly interface will help improve trust, encourage proactive health management, and foster a positive perception of our healthcare innovation.

Early Disease Detection Framework

Problem Statement (PS)	I am (Customer)	I’m trying to	But	Because	Which makes me feel
PS-1	A health-conscious individual or patient.	Detect early signs of disease.	Lack access to affordable and easy diagnostics.	Nail appearance changes are often early indicators of disease.	Hopeful for an accessible and early diagnosis.
